## Series

## Characteristics

The Series 70 consists of special short stroke pushbuttons for use with membrane keyboards. It is particularly suited for:

- PCBs

The use of single LEDs ensures that the entire control panel is very well illuminated. The module is offered in six colours and in a round or square design.

## Functions

The Series 70 incorporates the following functions:

- Indicator
- Pushbutton
- Illuminated pushbutton

## Market segments

The EAO Series 70 is especially suited for applications in the segments:

- Machinery and Automation
- Medicinal technology
- Laboratory and measuring equipment

Please refer to the EAO website to obtain detailed information regarding this series www.products.eao.com Configure a product to your exact needs and request a quotation.

C Holes for contact pins
Pad max. Ø 2.5 mm
Through-connection recommended

Component layout 4

Switching element illuminated Part No. 92-851.342

## Switching system

Short-travel switching system with two independent contact points and tactile operation. Guarantees reliable switching even of very light loads.
1 normally open contact

Material

Material of contact
Gold-plated silver

## Switching element

Thermoplastic Polyester (PET, PBT) and Polyacetale (POM)

Mechanical characteristics

## Actuating force

with overlay foil $4 \mathrm{~N} \pm 1,5 \mathrm{~N}$
Max. actuating force $>50 \mathrm{~N}$, as per DIN 42115

## Actuating travel

0.4 mm

Rebound time
$\leq 1 \mathrm{~ms}$

## Resistance to heat of soldering

$250^{\circ} \mathrm{C}, 3$ s (PCB assembly)
$320^{\circ} \mathrm{C}, 3 \mathrm{~s}$ (when using a soldering iron)

## Mechanical lifetime

$\geq 5$ Mio. operations (switching element without overlay)
$\geq 1$ Mio. operations (switching element under overlay)

## Electrical characteristics

## Contact resistance

Starting value (initial) $\leq 100 \mathrm{~m} \Omega$, as per IEC 60512-2-2b

## Isolation resistance

$\geq 1000 \mathrm{M} \Omega$

## Contact resistance

$\leq 100 \mathrm{~m} \Omega$
as per 500000 cycles of operation at $12 \mathrm{VDC}, 5 \mathrm{~mA}$ resistive load $\leq 200 \mathrm{~m} \Omega$

## Electrical life

$\geq 500000$ operations at 42 VDC, 50 mA , as per IEC 60512-5-9c When attention is paid to the direction of current flow from terminal $3 / 4$ to $1 / 2$ the electrical life can be prolonged.

## Switch rating

Switching voltage VDC/NAC min. 50 mV max. 42 V Switching current VDC/VAC min. $10 \mu \mathrm{~A} \quad$ max. 100 mA Power rating max. 2 W

## Electric strength

500 VAC, 50 Hz , 1 min , as per IEC 60512-2-4a

Environmental conditions

## Storage temperature

$-40^{\circ} \mathrm{C} \ldots+85^{\circ} \mathrm{C}$

## Operating temperature

$-25^{\circ} \mathrm{C} \ldots+70^{\circ} \mathrm{C}$

## Approvals

Declaration ot conformity
CE

## Switching element non-illuminated Part No. 70-100.0 and 70-101.0

Switching system
Short-travel switching system with two independent contact points and tactile operation. Guarantees reliable switching even of very light loads.
1 normally open contact

Material
Material of contact
Silver (Ag)

Mechanical characteristics

## Actuating force

with overlay foil $5 \mathrm{~N} \pm 2 \mathrm{~N}$
Max. actuating force $>50 \mathrm{~N}$, as per DIN 42115

## Actuating travel

0.3 mm

Rebound time
$\leq 5 \mathrm{~ms}$

## Mechanical lifetime

> 1 Mio. operations with overlay

Electrical characteristics

Isolation resistance
$\geq 50 \mathrm{M} \Omega$

## Contact resistance

$\leq 100 \mathrm{~m} \Omega$
as per 500000 cycles of operation at $12 \mathrm{VDC}, 5 \mathrm{~mA}$ resistive
load $\leq 200 \mathrm{~m} \Omega$

## 70

## Electrical life

at $5 \mathrm{VDC}, 1 \mathrm{~mA}>1$ million operations at $24 \mathrm{VDC}, 1 \mathrm{~mA}>100000$ operations

## Switch rating

$\leq 1$ watt (resistive load)

## Switch rating

$\leq 24 \mathrm{VDC}, \leq 50 \mathrm{~mA}$

## Electric strength

250 VAC for 1 min.

Environmental conditions
Storage temperature
$-30^{\circ} \mathrm{C} \ldots+85^{\circ} \mathrm{C}$
Operating temperature
$-20^{\circ} \mathrm{C} \ldots+70^{\circ} \mathrm{C}$

CE

Switching element non-illuminated Part No. 70-201.0

Switching system
Short-travel switching system with two independent contact points and tactile operation. Guarantees reliable switching even of very light loads.
1 normally open contact

## Material

Material of contact
Gold-plated silver

## Switching element

Thermoplastic Polyester (PET, PBT) and Polyacetale (POM)

## Mechanical characteristics

## Actuating force

with overlay foil $2.1 \mathrm{~N} \pm 0.2 \mathrm{~N}$
Max. actuating force > 50 N , as per DIN 42115

## Actuating travel

max. 0.5 mm

## Rebound time

$\leq 1 \mathrm{~ms}$

## Resistance to heat of soldering

$260{ }^{\circ} \mathrm{C}$, 3 s, as per IEC 60068-2-20

## Mechanical lifetime

$\geq 5$ Mio. operations (switching element without overlay)
$\geq 1$ Mio. operations (switching element under overlay)

## Front protection

front with overlay foil IP 65

## Electrical characteristics

## Contact resistance

Starting value (initial) $\leq 100 \mathrm{~m} \Omega$, as per IEC 60512-2-2b

## Isolation resistance

$\geq 1000 \mathrm{M} \Omega$

## Contact resistance

$\leq 100 \mathrm{~m} \Omega$
as per 500000 cycles of operation at $12 \mathrm{VDC}, 5 \mathrm{~mA}$ resistive load $\leq 200 \mathrm{~m} \Omega$

## Electrical life

$\geq 500000$ operations at 42 VDC, 50 mA , as per IEC 60512-5-9c When attention is paid to the direction of current flow from terminal $3 / 4$ to $1 / 2$ the electrical life can be prolonged.

## Switch rating

| Switching voltage VDCNAC | $\min .50 \mathrm{mV}$ | $\max .42 \mathrm{~V}$ |
| :--- | :--- | :--- |
| Switching current VDC/VAC | $\min .10 \mathrm{~mA}$ | $\max .100 \mathrm{~mA}$ |
| Switch rating | $\max .2 \mathrm{~W}$ |  |

Switch rating max. 2 W

Electric strength
500 VAC, 50 Hz , 1 min, as per IEC 60512-2-4a

Environmental conditions

## Storage temperature

$-40^{\circ} \mathrm{C} \ldots+85^{\circ} \mathrm{C}$
Operating temperature
$-25^{\circ} \mathrm{C} \ldots+70^{\circ} \mathrm{C}$

## Approvals

Declaration ot conformity
CE

## Suppressor circuits

When switching inductive loads such as relays, DC motors, and DC solenoids, it is always important to absorb surges (e.g. with a diode) to protect the contacts. When these inductive loads are switched off, a counter emf can severely damage switch contacts and greatly shorten lifetime.

Fig. 1 shows an inductive load with a free-wheeling diode connected in parallel. This free-wheeling diode provides a path for the inductor current to flow when the current is interrupted by the switch. Without this free-wheeling diode, the voltage across the coil will be limited only by dielectric breakdown voltages of the circuit or parasitic elements of the coil. This voltage can be kilovolts in amplitude even when nominal circuit voltages are low (e. g. 12VDC) see Fig. 2.

The free-wheeling diode should be chosen so that the reverse breakdown voltage is greater than the voltage driving the inductive load. The DC blocking voltage (VR) of the free-wheeling diode can be found in the datasheet of a diode. The forward current should be equal or greater than the maximum current flowing through the load.

To get an efficient protection, the free-wheeling diode must be connected as close as possible to the inductive load!

Switching with inductive load
Fig. 1

Counter EMF over load without free-wheeling diode

Fig. 2

## Note for soldering

## Process parameter for wave soldering

Basic specification for wave soldering J-STD 75 W4C
Maximum temperature on the component side of the pcb
$120^{\circ} \mathrm{C}$
(Temperature must not exceed during the entire processing)
Preheating phase (t1 ... t2)
Ramp up
Ramp up to maximum temperature (t2 ... t3)
Maximum temperature on the soldering side (Temp 3)
Maximum time of soldering process ( $\mathrm{t} 3 \mathrm{~F} . \mathrm{t} 4$ )
$70 \ldots 120 \mathrm{sec}$
typ. $+1^{\circ} \mathrm{C} / \mathrm{sec}$
not defined
$250{ }^{\circ} \mathrm{C}$

Ramp down at $170^{\circ} \mathrm{C}$ :
3 sec
typ. $-2^{\circ} \mathrm{C} / \mathrm{sec}$

## 70 Application guidelines

## Temperature curve wave soldering

Green curve:
Red curve:
Room temperature:
Preheating:

Temperature on the component side of the pcb Temperature on the soldering side of the pcb

Temp 1
Temperature process $=$ Temp $1 .$. Temp 2
Process time $=\quad \mathrm{t} 1 \ldots \mathrm{t} 2$

Ramp up to soldering temperature: Process time $=\quad$ t2 $\ldots$ t3
Soldering phase: $\quad$ Temperature process $=$ Temp 3
Process time $=\quad$ t3 $\ldots$ t 4

## Iron soldering

Basic specification for iron soldering IEC 60068-2-20
Maximum temperature at tip of iron: $\quad 320^{\circ} \mathrm{C}$
Maximum soldering time: 3 sec

## Cleaning/Lacquering

The switching elements are not sealed. Cleaning up the PCB may damage the contacts in the switching elements. For this reason, the following points should be noted:

- When soldering make sure that the flux does not pass on the upper side of the PCB.
- When cleaning the PCB with detergents ensure that no dust or other debris may get inside of the switching elements.
- Ensure that no lacquer penetrates into the interior of the switching element when lacquering the PCB.

## Storage of components

To obtain the optimum solderability of the components, the following points should be noted during storage:

- Do not store components in locations with high temperature or humidity.
- Do not expose components to corrosive gases.
- Avoid direct sunlight for a long period.
